

BANCE-Applicator2

Dual rail applicator for Interflon LeafGuard®

Key features:

- Manually propelled trolley design to apply Interflon LeafGuard® solution to both rail heads simultaneously
- 10-litre container is carried on the frame
- The pumps are driven by the rail wheels and isolating valves are also in the two feed lines to control/isolate the Interflon
- Fail-safe braking via push handle
- One-direction operation
- Single and towed variations are available

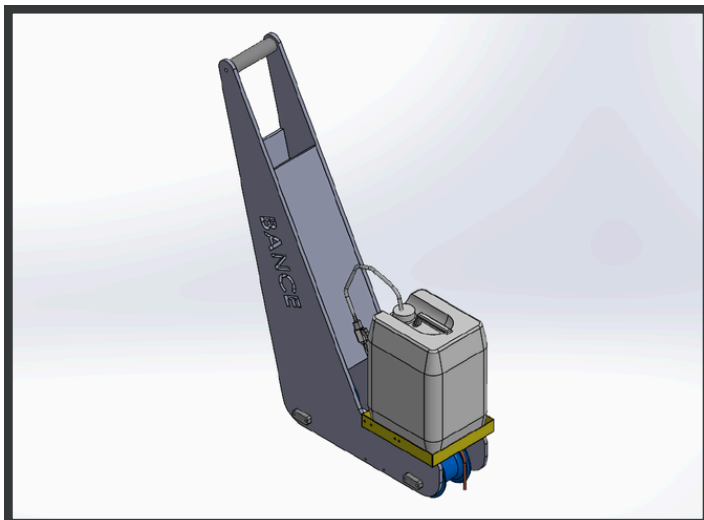

Specifications:

Frame	• One double and one single wheel pod, joined by hinged box sections that slide through the joining frame • The push handle locates into its socket on the joining frame • Stainless steel and plastic construction
Wheels & axles	• The wheels are made of blue nylon, with full P1 profile machined • Blue to indicate insulated • They are attached to solid axles with inboard ball bearings and are thus fully insulated
Pump transmission	• The peristaltic pumps are driven by the wheels, i.e. they only operate when the trolley is being pushed • There is one pump on each side of the trolley • The pumps draw the liquid from the container mounted on the joining frame • There is a tap in each supply line to restrict/isolate the supply as required • The liquid is directed onto the rail head via a nozzle and spread by a brush mounted behind the nozzle
Brakes	Fail-safe braking via push handle
Lights	White marker lights are fixed to the front and a red light is fixed to the rear - each are switched individually
Track circuits	Insulation between wheels (coloured blue) prevents operation of track circuiting
Storage	• The trolley and its separate push handle are stored in a carry bag • The Interflon container is stored separately from the trolley in accordance with local instructions

Dimensions & related information:

	BANCE-Trail
Width (fully extended)	1511mm
Length (excluding handle)	500mm
Height (excluding handle)	525mm
Weight	15kg
Interflon container weight	10kg
Gross vehicle weight	10kg + 15kg = 25kg
